

SummerSaverSM Event Notification

Today, **Tuesday, July 5, 2022**, a SummerSaver event will begin at 2 p.m. and will run through 7 p.m. for participating Iowa and Illinois residential customers. This is the first cycling day of the 2022 SummerSaver season.

You may receive an uptick in service calls for air conditioners not cooling today. Prior to going out on a service call during this time period, ask the customer if they are participating in MidAmerican Energy's SummerSaver program. If so, this may be why their home feels warmer than usual.

If the customer has a Load Control Receiver (LCR) installed on their home, the compressor on their air conditioner or air-source heat pump will cycle on and off during the event.

LCR device information and troubleshooting tips are [available online](#) 24/7.

If a customer is participating through their smart thermostat, the temperature setting is increased by three degrees during the event. Typically, the customer is notified of the event from the thermostat manufacturer. In addition, event messaging may also be displayed on the thermostat.

For more detailed information on the program and how the cycling devices work, please visit our website or call [877-290-4517](tel:877-290-4517).
